CORE SKILLS

- Python · Django
- JavaScript (ES6+)
- MySQL · REST APIs
- Session-based Auth & bcrypt
- Bootstrap 5
- AJAX (Fetch API)
- Git & GitHub
- AWS EC2 · Render
- Unicorn · Nginx · systemd
- Stripe API · Twilio API

CURRENTLY LEARNING

- MERN Stack — MongoDB, Express, React, Node.js

LANGUAGES

Arabic — Native
English — Professional

EDUCATION

Full-Stack Web Development Program
AXSOS Academy
Final stage / graduating

PROFILE

Full-stack developer based in Ramallah, Palestine, in the final stage of an intensive full-stack web development program at AXSOS Academy. Builds complete, production-style applications with Django, MySQL, and JavaScript — covering authentication, payments, real-time-style messaging, and third-party API integrations. Has independently deployed multiple projects to live cloud environments (AWS EC2, Render), and is now expanding into the MERN stack to work confidently across both Python and JavaScript ecosystems.

FEATURED PROJECTS

Rentora — Peer-to-Peer Tool Rental Platform · [Django](#) · [MySQL](#) · [Bootstrap 5](#) · [Stripe](#) · [AWS EC2](#) · [Gemini AI](#)

- Graduation group project; owned the booking module end-to-end, including date-conflict detection and approve / reject / dashboard workflows.
- Built a full "Report User" system with an auto-flagging Report model and a dedicated UI.
- Designed a sidebar-based dashboard and deployed the app to production on AWS EC2 with Unicorn, Nginx, and systemd.
- Integrated Stripe for payments and an AI-powered search feature using Google Gemini.

BloodBridge Palestine — Blood Donation Platform · [Django](#) · [MySQL](#) · [Twilio WhatsApp API](#) · [Render](#)

- Dual account system for Donors and Hospitals, with blood-type compatibility logic and city-based filtering.
- Integrated the Twilio WhatsApp API for donor/hospital notifications.
- Deployed independently on Render, handling environment configuration, credential security, and Git history cleanup after a secret-scanning block.

The Wall — Social Messaging App · [Django](#) · [AJAX \(Fetch API\)](#) · [bcrypt](#)

- Facebook-style messaging app built across two coordinated Django apps.
- Implemented dynamic, no-reload interactions using AJAX via the Fetch API.
- Built an owner-only delete feature with a 30-minute edit/delete window.

DojoReads — Book Review Platform · [Django](#) · [MySQL](#) · [bcrypt](#)

- Full CRUD book review platform with secure bcrypt-based authentication.
- Custom Review model with star-rating logic.

ADDITIONAL PRACTICE & CONTINUOUS LEARNING

- Studied core data structures & algorithms: binary search trees, tree traversals, recursion, memoization, and dynamic programming.
- Built Python CLI projects (Quiz Game, Hangman) with full READMEs and public GitHub repos.
- Deep-dived into Django internals: ORM, MTV architecture, migrations, ForeignKey / ManyToMany relations, CSRF protection, and custom session middleware.
- Studied production deployment workflows: Unicorn, systemd services, Nginx reverse proxying, and Unix sockets on AWS EC2.
